MF HAY & FORAGE RANGE

FIND OUT MORE

Massey Ferguson is proud to offer a full line of forage solutions, including high quality, robust and energy efficient mowers, conditioners, tedders and rakes.

We have always stood for innovative technology, outstanding quality and a personal passion for serving agriculture and feeding the world.

We are always investing in our staff, modern facilities and technology, as well as an extensive dealer network that we are proud to offer, giving you an optimum solution for your farming requirements. All products have undergone extensive testing programs.

MF DM SERIES LINKAGE MOWERS & MOWER CONDITIONERS

Massey Ferguson's tried and true, rear mounted three-point hitch disc mowers, number fourteen models in three ranges, with cutting widths from 2.5m to 4.5m. Some models feature tine or roller conditioners for additional flexibility and faster crop dry down times. We have a mixture of end fold and centre pivoting cutterbars built to cover a broad range of operations and price points.

We also have two ranges of front mounted disc mowers and mower conditioners, with cutting widths from 3.1m to 3.6m these machines can also be fitted with tine or roller conditioners.

For the large operator, we also have two 'Butterfly' models with cutting widths of 8.6m and 9.6m. These machines combined with the front mounted units allow for extremely high productivity. The 8.6m machine can also be fitted with tine or roller conditioners.

MF 1300 SERIES MOWER CONDITIONERS

Slice through tough, tangled crops at speeds that can only be attained with a rotary disc machine and the manoeuvrability that the Massey Ferguson 1300 Series centre-pivot models can provide. Choose the 2.97m cutting width MF 1376, the MF 1393 with its 3.96m cutting width, or step up to the MF 1316 S with its 4.9m cutting width.

All three machines feature a centre pivot design, and our robust RazorEdge™ cutterbar. The MF1376 is available with steel or rubber conditioning rollers, while the MF 1393 and the MF 1316 S has the options of steel rollers or rubber on steel rollers.

MF 9300 SERIES DISC HEADERS

You need your disc header to cut crop cleanly and effectively, then condition it before depositing it in a consistent swath. Our MF 9300 Series RazorBar™ disc headers do just that, offering industry-leading performance to maximize the value of your hay. We have two models, the MF 9313D, 3.96m cutting width, and the MF 9316D at 4.9m cutting width.

Both disc heads are fitted with the TwinMax™ advanced conditioning system that comprises two sets of steel-on-steel conditioning rolls, that gently crimp the crop stems every 25 to 50mm, while allowing the crop leaf to pass undamaged, significantly reducing the crop drying time and retaining the crop nutrient value.

MF RK SERIES ROTARY RAKES

Designed to fit both farmer and contracting operations, Massey Ferguson RK Series rotary rakes gently sweep your crop in even fluffy windrows for faster drying and better baling. We have four single rotor rakes from 3.6 to 4.5m rotor to windguard coverage. We have four centre delivery rakes with working ranges from 5.8-6.6m, 6.8-7.6m, 7.2-8.0m and 8.8-10.0m.

We have three side delivery rakes that can produce one or two swaths per pass. The RK672 SD single swath width = 5.8m and double swath width = 6.7m. The RK702 SDX single swath width = 6.3m and double swath width = 7.0m. The RK772 SD single swath width = 6.6m and double swath width = 7.7m. We also have one model four rotor centre delivery rake with a working width of approximately 12.5m.

MF TD SERIES TEDDERS

When it comes to drying hay, it's nearly impossible to beat Mother Nature. You can accelerate Mother Nature's gifts by spreading the crop with a professional-grade Massey Ferguson TD Series Tedder. Massey Ferguson professional-grade tedders are designed for the most rugged conditions, maximizing your ROI and minimizing the hay drying cycle. MF TD Series tedders features a range of configurations and working widths to fit many applications, with proven performance and low maintenance design.

The new MF TDX Series tedders boast one-pass tedding in the heaviest crop conditions. Hook tines and a robust frame ensure the MF TDX series will perform day after day, with even distribution in a single pass.

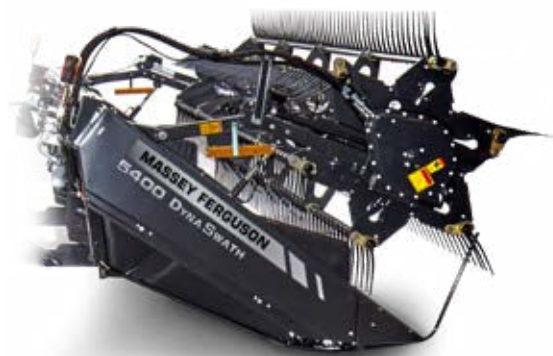

MF SELF-PROPELLED WINDROWERS

No other windrower helps you produce quality hay faster, more efficiently or more comfortably. With the power to handle all crop conditions, comfortable cabs and great hydraulic capacity for high productivity, you'll find your best hay with Massey Ferguson. WR Series windrowers feature two proven and dependable AGCO Power™ engines, ranging from 197-265 engine horsepower. The WR197 is powered by the AGCO Power 4.9-liter, four-cylinder engine, while the WR265 is powered by the AGCO Power 7.4-litre, 6-cylinder engine.

Each model features a large tandem hydraulic header drive pump for increased hydraulic capacity and control. The available power and capacity across the range gives operators the versatility to run disc and draper headers. The Vision™ Cab from Massey Ferguson provides superior visibility. Compared to other cabs, it's more spacious, too, with ergonomically inspired comfort enhancements. We designed the cab to surround you in the ultimate comfort so you can work longer and harder, with less fatigue.

MF 5400 SERIES DRAPER HEADERS

We know you need a top-of-the-line draper header. That's why we've taken the time to make sure no detail has been overlooked in the design of our MF 5400 Series headers. No matter what your operation needs, you can rest assured any of our MF 5400 Series headers will get the job done.

These machines come in four cutting widths, 7.6m, 9.1m, 10.7m and 12.2m. All are fitted with centre or side crop delivery with double Schumacher knives and knife guards. Designed to handle large crops these fronts come with a huge 2m crop discharge opening.

MF 1840 SERIES

SMALL SQUARE BALER

The MF 1840 small square baler employs a 'centreline' design in which the crop flows through the machine in a straight line – working like a mini large square baler, improving efficiency because the crop is not turned before entering the chamber.

Key features are retained from its predecessor, such as narrow transport width, 1.9m wide pick-up with standard gauge wheels, short stroke and high speed.

MF 1842S

SMALL SQUARE BALER

The MF 1842S has been developed to meet the demands of customers requiring a super heavy-duty, high-capacity small square baler with significant additional feeding capacity, output, and extra density if required.

This high-capacity square baler shares key features of the MF 1840 which have made that model so successful. These include the in-line layout which ensures consistent crop flow, a large pick-up which is even wider on the new model, and compact dimensions for great manoeuvrability.

MF 2200 SERIES

NEW GEN

LARGE SQUARE BALER

Building on the success of its predecessor, the MF 2200 LB Series brings significant updates and new features to further enhance performance. New 'Bale Create' terminal display, new electronic bale length control, new tandem axle and suspension, sealed for life packer crank bearings, full LED service and road lighting, high-capacity pick-up with five rows of tines and quad auger feeding and much more.

The large square baler range retains five models covering four bale sizes. New model numbers have been introduced. These square balers make dense, well-formed bales, and are renowned for their reliability, longevity and low cost of ownership.

MF RB SERIES ROUND BALERS

MF RB 3130 F SERIES

FIXED CHAMBER RANGE

An extremely reliable and high performing range of baler models tailored to your specific needs producing high density hay, silage or straw bales, while remain simple, easy to set up and adjust.

MF RB 3130 F SERIES

FIXED CHAMBER RANGE - PROTEC

MF RB 3130F Protec (Protection baler and Professional Technology) combines all the benefits of a fixed chamber baler with the addition of an integrated wrapper device for baling and wrapping on the go.

MF RB 4100 V SERIES

VARIABLE CHAMBER RANGE

Bale more hay faster with a 4100V Series Round Baler from MF. This series gives you heavier, denser bales saving you time and money.

MF RB 4160 V SERIES

VARIABLE CHAMBER RANGE - PROTEC

MF RB 4160V Protec (Protection baler and Professional Technology) combines all benefits of our variable chamber baler with the addition of an integrated wrapper device for fast and effective baling and wrapping on the go.

MF TELEHANDLER SERIES

FIND OUT MORE

MF TH TELEHANDLER

100 - 135 HP BUILT TO WORK HARD WITH YOU

Purpose built for hard work, MF TH telehandlers deliver the lift heights, capacities and reach you need for fast, accurate and efficient handling. Powerful, precise hydraulics and a high specification make light work of every task – from shifting bales in the field or yard, lifting, stacking, and loading, to working in confined spaces and traditional buildings.

For access to really tight areas there's the semi-compact MF TH 6030 model. Like the standard machines, these have four steering modes to enhance manoeuvrability and all offer superb all-round visibility.

More engine power and oil flow for the most demanding handling and transport applications, 135hp and 190 l/min oil flow for reduced full work cycle combined with a cab that offers ultimate comfort, ergonomics, and visibility.

Massey Ferguson has completely transformed the MF TH telehandlers, which offer a giant leap forward in efficiency and productivity, new levels of visibility, ease of use and comfort. This isn't just an upgrade. It is a breakthrough.

Model	Max Lift Height (m)	Max Lift Capacity (kg)	Transmission	Cab Height (mm)	Oil Flow (L/Min)	Max Power (HP)
MF TH 6030	5.9	3,000	Hydrostatic	2,184*/2100**	100	100
MF TH 7038	7	3,800	Hydrostatic	2,457*	190	135
